Scott Farm Seed Company

DEC 3 0 1948

U. S. Department of Agriculture

Mechanicsburg, Ohio

#### DEAR SCOTT CUSTOMER:

Quite a few Scott Farm Seed folks like this early price list to see the prices on the various items and to get a part of their seed ordered before the first of the year.

Some may be surprised at lower quotations on red clover, alsike, hybrid corn and seed oats, or maybe more so at the higher costs on alfalfa, brome and timothy because of short seed crops. But the average won't be much different than a year ago.

We feel sure you will again like the top quality, high germinating, noxious weed free seeds that are listed on the inside pages. In the 1948 Year-book for Agriculture, E. A. Hollowell writes: "The most important single thing to do to get a good stand is to buy good seed and give it a chance to grow."

Several new meadow and pasture mixtures are listed this time. Please keep one thing in mind: that all of SCOTTS mixtures contain plump, mature, top quality seed and not clean-out from some other seed or something that has just been gathered together.

A lot of folks are undecided as to which Oats is best so we are starting with seven different varieties. Mindo and Columbia are the earliest, Clinton 59 is more uniform in height and maturity than Clinton; Mohawk is closely related to Clinton and used mostly in New York and Pennsylvania; Eatons are white, and Bentons are a little later and taller than Clinton. Seed Oats will be darker in color this season than last because of unfavorable weather at harvest time.

SPECIAL OFFER—December only, a 2% discount on all orders for which full payment is received. We will be in position to make shipment on quite a few seed items during late December and the forepart of January. Early ordering will help relieve the rush of late January through March orders and shipments. Then, too, the seed will arrive in plenty of time so there won't be delays in seeding.

Your copy of the new color bulletin on Hybrid Corn will be sent with the early January price list.

Sincerely,

### SCOTT FARM SEED COMPANY

P. S. If you want any kind or variety of farm seed not listed let us know. If available feel sure we can get it for you.

## Seed Price List

"SCOTTS" grade is the highest quality seed available. It is carefully selected and thoroughly recleaned. Noxious weed free. May contain 0.10% to 0.25% other crop seed and in most cases will test 99.75% pure seed.

# December 1, 1948

SPECIALS: The grades marked "Special" may be slightly off in appearance, lower in germination, or contain a small amount of other clovers or crop seed. This seed is clean and perfectly safe to sow.

### TREATED HYBRID SEED CORN

SCOTTS Hybrid Corn has been graded for width, length and thickness and will plant easily and accurately in any make of planter. It is treated for protection against disease. The round kernels are graded uniformly and will yield just as well as the flats but special plates are usually required for accurate planting. These plates are available for most standard planters. Ohio Certified Hybrids not listed are available upon inquiry.

SILAGE BLENDS (Early or Late)		pen Pollinated)

ROUNDS—Only medium and large rounds are offered. Carefully graded, high in germination, produce strong plants, and will yield as well as flats at a saving in seed cost. The same grades are available each year.

SCOTTS 11—Slightly earlier than Ohio M-15. Large ears for an early hybrid. Has out-yielded Ohio M-15. Sound dark yellow ears. Suited to short season or late planting.

SCOTTS 22—The maturity of Ohio M-20 and M-34. Has outproduced its maturity class on many different farms. Good roots, sound ears, good quality fodder, dries out quickly.

SCOTTS 33—Maturity of K Hybrids. A real producer with disease and smut resistance. Easy husking, nice fodder not as tall as K-24. Will pick clean and crib early.

SCOTTS 66—One of the best medium maturing hybrids in the corn belt. Disease resistant, husks easily, strong roots, high yields on a wide variety of soils.

SCOTTS 60 W—A white hybrid, medium sized fodder and ears. A good producer in its maturity class. Strong roots and stalks, good crib corn. Thoroughly tested in the corn belt.

EARLY SILAGE BLEND—A blend of the earlier maturing hybrids for short season use. Seed is uniformly graded and above 90% germination. Will plant 8—10 acres per bushel and may be used for crib corn.

SCOTTS 75—Slightly earlier and not quite as tall as most of the C Hybrids, blight resistant, sturdy stalks, large dark yellow ears, bred for handy size and high yields.

SCOTTS 99—Maturity of U. S. 13 and bred for more corn borer resistance and higher yield. Dark green color. Not quite as tall as U. S. 13. Good sized, sound ears.

LATE SILAGE BLEND—A blend of the later maturing hybrids recommended for full season planting. Slight variation in maturity gives high yields of balanced quality feed. May be used for crib corn.
